# 26<sup>ai</sup>

There is no need to re-certify your app

- Certification for Oracle Database 23ai applies to Oracle AI Database 26ai

*Your Road to Oracle AI Database 26ai*

**ANALYZE** ⇒ **UPGRADE** ⇒ **GO-LIVE**

# Before Upgrade

Considerations and tasks

## Oracle AI Database 26ai supports the multitenant architecture only

- You must convert your database to a PDB

--Use up to 3 user-created PDBs  
--without a license for Multitenant option.  
--Applies to Oracle Database 19c and newer, including SE2

**alter system set max\_pdb=3;**

## Update Exadata System Software to the latest version

- VM Cluster OS updates

# Further Information

## Exadata System Software

Recommended to use latest version.  
However, minimum version is 25.1

[MOS Note: 888828.1](#)

Exadata Database Machine and Exadata Storage Server  
Supported Versions

## Upgrade to Oracle Grid Infrastructure 26ai

- Manages Oracle Database 19c and newer
- Upgrade older databases in advance

--Grid Infrastructure 26ai requires a minimum compatible setting

--Databases older than 19c may not use this disk group anymore

```
alter diskgroup DATA set attribute 'compatible.rdbms' = '19.0.0.0.0';
```

## Confirm your clients can connect to Oracle AI Database 26ai

- Upgrade your clients well in advance of the upgrade

# Oracle Release Analyzer Diff Utility

Find the differences between two Oracle Database releases

Oracle Release Analyzer Diff Utility (ORAdiff) allows you to compare two database releases to each other - with or without patch bundles on top.

## Get Started

1. Click the menu icon on the upper left corner of the page
2. Select an object type from the left-hand navigation menu
3. Choose the Source and Target versions and patch levels
4. View the report. You may optionally choose a filter

The tool will display the differences such as "new tables", "added parameters", "changed columns", "removed privileges" and much more. Its search can tell you when a parameter was added and which files changed in your Oracle Home.

## OJVM is embedded in Release Updates

- No separate download
- Complete RAC Rolling patching support

## Gather dictionary and fixed objects statistics

- Up to 7 days in advance

Perform a precheck

```
-- Check the detailed output of the pre-upgrade analysis  
-- This also highlights any required post-upgrade tasks
```

```
cd /u01/app/oracle/cfgtoollogs/dbua/$ORACLE_UNQNAME/$ORACLE_SID/100/precchecks  
cat *_preupgrade.log
```

## Back up your database

- Disable automatic backups

# Upgrade

Cloud Automation and Refreshable Clone PDBs

In the cloud, upgrading Oracle databases  
is as **easy** as pressing a button

-- Monitor the database upgrade using DBUA log files

```
cd /u01/app/oracle/cfgtoollogs/dbua/<job-id>  
tail -100f silent.log
```

Next,  
seed and user PDBs

First,  
upgrade root

Proceed in batches

## Cloud tooling uses default settings

- Include an upgrade of timezone file

# Refreshable Clone PDBs

**DEMO**

# Upgrade to Oracle AI Database 26ai

## Key Benefits of Upgrade via Refreshable Clone PDB

- 1 Less downtime
- 2 Excellent rollback option
- 3 Full flexibility

*We used AutoUpgrade and refreshable clone  
to move a mission-critical 76 TB database  
to Oracle Database 23ai in **less than 45 minutes**  
- while preserving the source as rollback option*

# Works everywhere

# Works everywhere

- Base Database Service
- Exadata Database Service
- Exadata Cloud@Customer
- On-prem and other clouds
- Exascale migration
- Non-CDB to PDB migration
- PDB upgrade
- On-prem to cloud migration

## You must restore the PDB on standby database after upgrade

- Refreshable clone works only with deferred recovery on standby database

## The **easy** approach

Upgrade entire CDB, including all PDBs

## The **fast** approach

Upgrade single PDB

## You can also migrate with Data Pump or Transportable Tablespaces

- Suitable when direct upgrade is not possible
- Smaller databases
- Reorganizing data
